CSS	Strong
Sass (scss)	Solid
JavaScript	Solid
React v16+	Solid
NodeJS	Basic
Shell	Solid
Git	Solid
Docker	Basic
SQL	Basic
C	Basic
Go	Basic
Python	Basic

## PROFESSIONAL PROFILE

I am an IT professional looking to transition into the web development space. I have worked in IT for many years and have discovered a passion for software engineering. I have spent the better part of a year fully immersing myself in the pursuit of growing my developer skills. I moved to the Silicon Valley to participate in a coding boot camp, am currently attending a coding school there and I've completed dozens of hands-on trainings on several programming languages and software stacks.

## PROFESSIONAL EXPERIENCE

### IT Consultant

NAMO Group Solutions, LLC 2014 – 2018

Helped in restructuring business from sole proprietorship into an LLC. Shifted business focus towards providing software solutions, resulting in an increase to revenue. Built and configured a Remote Desktop Server to host software packages allowing one-time updates vs going onsite to update customers one by one. Provided IT services such as remote and on-site customer support, computer repairs, hardware and software installations and many more.

- Created NGSPrices, an invoicing web application, that is being used by several businesses for their day to day operations - *ASP.NET, Azure, jQuery, Bootstrap, SQL Server*
- Continually maintained and improved web app over the years
  - Added AJAX to parts of the site for a better user experience
  - Implemented non-clustered indexes to improve expensive DB queries
  - Routinely cleaned and imported raw CSV data into production DB
  - Created weekly Azure Web Jobs to scan and defrag DB indexes
  - Provided customer support and bug fixes when reported
- Acquired Microsoft sponsorship through BizSpark to help minimize development and training costs.

## PROJECTS

### WordPress Website

Volunteer, [www.thestoryofjesusstudy.com](http://www.thestoryofjesusstudy.com)

This was a volunteer opportunity for a church that wanted to form a study group with members around the world. I worked alongside a non-technical church member who made most of the major decisions concerning theme, assets, UI navigation, etc...

### Portfolio Site

Personal Project, [www.nilsonmolina.com](http://www.nilsonmolina.com)

Created this site using only HTML/CSS and minimal vanilla JS. I could have used libraries, plugins, pre-processors and many other tools, but I wanted to show that I had enough foundational knowledge to work without the need for those tools.
